

City Map

Districts of Madrid, coloured by population density.

- 1- "When we look at the map of Madrid, we notice that the number of females and males in the north is close, but when we look at the east, we notice that females predominate in their percentage, unlike the central region in which males predominate.

We conclude from this that males prefer to live in the center of the city and females prefer its outskirts."

Foreign Population by Origin

Passenger cars

1.26M

Cars per 100 inhabitants

39.6

2- "when we look at the total population in madrid is 3.18m and the deaths is lower than the births so the population is increasing."

3- Madrid has a small percentage of foreigners, so we find that the percentage of citizens is 87.9% and the percentage of foreigners is 12.1%, and we conclude from that that Madrid does not rely heavily on foreign labor
